Commonly Used Terms Tab

**Asperger's Syndrome:**
Is similar to autism except that there is no general delay or retardation in language or cognitive development.

**Attention Deficit Hyperactivity Disorder (ADHD):**
A developmental disorder with onset in childhood and with impairments in the ability to maintain attention to task combined with impulsive and hyperactive behaviour. Criteria for diagnosis defined in ICD-10 and DSM-IV.

**Autism (also known as Autism Spectrum Disorder - ASD):**
Or sometimes Autism Spectrum Condition - ASC) A neurodevelopmental disorder with onset in childhood characterised by impairments in reciprocal social interaction and social communication, combined with restricted interests and rigid and repetitive behaviours in children, young people and adults.

**Biomedical test:**
A test carried out on the body or on a sample of blood.

**Child and Adolescent Mental Health Service (CAMHS):**
This is a specialist health service for children and adolescents with mental health problems.

**Child Development Team:**
A multi-disciplinary team offering an assessment of (usually young) children with developmental problems, sometimes attached to a hospital or separately in the community, and part of child health services.

**Chronological age:**
The exact age in years and months of a child measured from birth.

**Educational Psychologist:**
An Educational Psychologist is concerned with helping children or young people who are experiencing problems within an educational setting with the aim of enhancing their learning. They work directly with young people as individuals or in groups and also advise teachers, parents, pastoral workers and other professionals who are involved with the child.

**Global developmental delay:**
A term used to describe a delay in all aspects of development usually in young children before they are able to complete a standardised test of intellectual ability.

**ICD-10:**
International Classification of Diseases Tenth Version used by clinicians to classify and code diseases and disorders.

**IQ:**
( Intelligence quotient) An Intelligence quotient is a score derived from one of many different standardised tests designed to assess intelligence. IQ assessments are also referred to as cognitive assessments or psychometric assessments.

**Paediatrician:**
A Paediatrician is a medically qualified doctor who specialises in diagnosing, looking after and treating children and young people who are ill or whose development gives cause for concern.

**Perinatal Developmental Disorder (PDD):**
A term used to describe a group of disorders characterised by quantitative abnormalities in reciprocal social interactions and in patterns of communication, and by restricted, stereotyped, repetitive expiation of interests and activities.

This is a Read Only page with some useful terms and clinical conditions which you might come across during your hospital visits. Scroll down for more info.
